xpressions®
LED LIGHTBOX

Make sure to connect the Auto-Locks on your Xpressions display. This will help support the light box system.

Your unit will ship with the light box system attached to the front of the frame. You will need to attach the support bands for the back of the light box to expand and support the light box system.

Connect the graphic that will be backlit over the front of the light box system by using the corner hubs for that section.

1 - Connect the male end of power cord (connected to the light box system) into the female end of the power cord (connected to the plug).

2 - Plug the cord into a wall outlet.

The light box system will light up as soon as it is pluged in and backlit your graphic skin.
